## **1. INTRODUCTION AND GENERAL INFORMATION**

The first two volumes of this report are devoted to a presentation of environmental data and supporting narratives for the U.S. Department of Energy's (DOE's) Oak Ridge Reservation (ORR) and surrounding environs during 1987. Volume 1 includes all narrative descriptions, summaries, and conclusions and is intended to be a "stand-alone" report for the ORR for the reader who does not want to review

in detail all of the 1987 data. Volume 2 includes the detailed data summarized in a format to ensure that all environmental data are represented in the tables. Narratives are not included in Vol. 2. The tables in Vol. 2 are addressed in Vol. 1. For this reason, Vol. 2 cannot be considered a stand-alone report but is intended to be used in conjunction with Vol. 1.

**Table 1.1.1. Administrative<sup>a</sup> units on the ORR in 1987**

Description	Forested area (ha) <sup>b</sup>	Total area (ha)
Resource management <sup>c</sup>	12,221 (30,185) <sup>d</sup>	14,050 (34,705)

ORNL primary plant complex <sup>e</sup>	4 (10)	147 (364)
ORGDP primary plant complex <sup>e</sup>		405 (1,000)
Scarboro Facility (ORAU-DOE)	81 (200)	432 (1,067)
<b>Total</b>	<b>12,306 (30,395)</b>	<b>15,386 (38,006)</b>

<sup>a</sup>Administrative units are those units that are managed by a major installation or by central Energy Systems.

<sup>b</sup>Hectare (ha) = 2.47 acres.

<sup>c</sup>Resource Management is the unit managed by central Energy Systems.

<sup>d</sup>Numbers in parentheses denote acres.

<sup>e</sup>Primary plant complexes within fenced areas and facilities outside but adjoining the fenced areas.

<sup>a</sup>The lowest concentration reported (LCR) may vary among specific samples, depending on interferences in the sample matrix. However, these LCRs have been assigned to accommodate most minor interferences. Some of the Energy Systems LCRs are higher than the method detection limits (MDLs) listed by EPA. This is consistent with guidance from EPA. However, any data reported below the MDLs must be supported by sound documentation. The LCRs applied by the Energy Systems laboratories meet the needs of the programs they support.

<sup>a</sup>The lowest concentration reported (LCR) may vary among specific samples, depending on interferences in the sample matrix. However, these LCRs have been assigned to accommodate most minor interferences. Some of the Energy Systems LCRs are higher than the method detection limits (MDLs) listed by EPA. This is consistent with guidance from EPA. However, any data reported below the MDLs must be supported by sound documentation. The LCRs applied by Energy Systems laboratories meet the needs of the programs they support.

<sup>a</sup>Percent error for the laboratory based on three replicate analyses.

<sup>b</sup>The wrong efficiency factors were used for these analyses. The efficiency factor for a filter smaller in size than the one analyzed was used. Had the correct efficiency factors been used, the ORNL values would have been 20 to 30% higher.

<sup>c</sup>The data were reported in the wrong units. This result was reported in Bq/kg instead of the required units of pCi/g. Converting the 3.80 Bq/kg to pCi/g would yield a value of 0.103 pCi/g—the actual value obtained by ORNL. The performance on this result would therefore have been acceptable if the proper units had been used.

<sup>a</sup>Average of 10 months results at ORNL. All parameters were not analyzed each month.

<sup>b</sup>The average number of standard deviations from the mean of all participants. The number of participant laboratories varied depending on the parameters and the month.

<sup>c</sup>For EPA, the warning level is 1.96 standard deviations, and the acceptance level is 2.58 standard deviations from the mean.

<sup>d</sup>Unacceptable value generated because of procedural error. The blank background was not subtracted from the measured value before reporting.

<sup>e</sup>One of the unacceptable values was generated as a result of a transpositional error.

<sup>f</sup>The unacceptable value was generated because of a data-entry error. The average percent recovery would have been 99%, and the average number of standard deviations would have been 0.50 if this unacceptable value were disregarded.

<sup>g</sup>The values reported were at or below the reporting limits for the methods. Normally, a more sensitive method would have been used and these results would not have been included in the statistical analysis.

<sup>d</sup>Unacceptable value was generated as a result of a transpositional error. The average percent recovery would be 80%, and the average number of standard deviations would be 0.69 if this unacceptable value were disregarded.

<sup>e</sup>The unacceptable value was generated because of a data entry error. The average percent recovery would be 94%, and the average number of standard deviations would be 0.46 if the unacceptable value were disregarded.

<sup>f</sup>The reason for the marginal and unacceptable values is still under investigation. EPA controls are scheduled for analysis alongside the next monthly PET controls.

<sup>g</sup>The unacceptable value was generated because of a decimal placement error. The average percent recovery would be 102% and the average number of standard deviations would be 0.93 if the unacceptable value were disregarded.

<sup>a</sup>There was an error in data transfer that resulted in samples from the laboratory being in mg/L. The EPA values were in µg/L, as reflected in the evaluated EPA report. This was explained in a letter dated June 26, 1987, which was sent to EPA and the state of Tennessee.

<sup>b</sup>Based on theoretical calculations or a reference value when necessary.

<sup>c</sup>Units are mg/L except for pH, which is reported in pH units.

<sup>d</sup>Several samples are processed as a batch with known controls, and the known controls were within acceptable limits. No apparent reason for this nonconformance.

Table 7.3.1. Environmental audits and reviews at ORNL during 1987

Date	Audit/review	Reviewer/ auditor	Subject	Findings/outcome
<i>External regulatory</i>				
3/4-5/87	RCRA inspection	EPA	Review of RCRA facilities and records	All facilities and record-management practices in order.
6/9-10/87	RCRA inspection	TDHE	Review of RCRA facilities and records	All facilities and record-management practices in order.
6/24-25/87	NPDES performance audit inspection	EPA/TDHE	ORNL's NPDES self-monitoring program	A number of minor problems involving equipment and methods, documentation and reporting procedures, and sample analysis were identified.
10/15/87	Air permit review facility inspection	TDHE	Permit list reconciliation and facility inspection	ORNL and TDHE permit lists were found to be identical. Permits were granted after source inspection.
<i>DOE</i>				
2/17-19/87	QA program appraisal	DOE-ORO	Environmental monitoring, ERFU Program, and wastewater treatment	
4/6-16/87	Environmental protection appraisal	DOE-ORO	Policies, training, communication, incident reporting, and performance	A number of items and recommendations designed to strengthen ORNL's environmental program were made.
8/17-9/4/87	DOE Headquarters environmental survey	DOE/NUS <sup>a</sup>	Identification of ORNL environmental problems and areas of environmental risk	A number of known or potential environmental problems were identified. The survey's findings generally supported ORNL's knowledge concerning the status of environmental conditions at ORNL.

<sup>a</sup>Environmental specialist from NUS Corporation, under contract to DOE Headquarters in Washington, D.C., performed the site survey.
